ALL BLACK STEALTH LED MODULES

AMPEROR INTRODUCES THE NEW ALL BLACK STEALTH MODULE LED LIGHTING SYSTEMS

HOUSTON, TX – Amperor, Inc., announces the introduction of the latest addition to their LED Lighting System Product Line. As the name *STEALTH* implies this new addition to our line up of LED products is targeted for applications where end users want their light source to remain discreet when they are not lit.

Our LEDs are so versatile that they can be used in applications other than signage. Their sealed encapsulated design means they are perfect for high moisture applications. They are easy to install and feature both 3M VHB™ tape and a hole through design so they can be mechanically fastened. This low voltage 12VDC product can be used in interior applications such edge lighting, cove lighting, accent lighting, and bar lighting. Additionally because of its all weather design it's perfect for ground effect or accent lighting in automotive, motorcycle, and marine applications.

Stealth colors are currently available in 5500K White and can be special ordered in 4000K White, Blue, Green, Amber, and Red. Modules come with a 5 year warranty and are UL approved.

Amperor LED Lighting Systems are available directly through AmperorDirect.com
